RETRAKTOREN RETRACTORS

Retraktoren für die retrograde Wurzelspitzenresektion

Beim Einsatz des Retraktors werden zunächst 2 kleine Vertiefungen in den Kieferknochen gebohrt, in welchen dann die beiden Spitzen am Instrumentenende einen zuverlässigen Halt finden.

Retractors for retrograde root resection

Before the use of the retractor, 2 slight deepenings are burred in the jaw. The 2 tips at the working end of D0373R are inserted and will therefore also provide a reliable grip.

PRÄPARIERSCHEREN, Noir® PRÄPARIERSCHEREN
DISSECTING SCISSORS, Noir® SCISSORS

Die speziellen Eigenschaften der Noir® Präparierscheren ermöglichen ein Präparieren noch feiner und zuverlässiger als je zuvor. Noir®. Schonendes Präparieren mit minimalem Kraftaufwand.

The special qualities of the Noir® dissecting scissors allow dissection that is finer than ever before. Noir®. Gentle dissection with minimum use of force.

ZAHNÄRZTLICHE CHIRURGIE

DENTAL SURGERY

Mikrotomschliff - besonders scharfer Anschliff des Scherenblattes für sanftes durchtrennen des Gewebes bei minimalem Kraftaufwand.

Microtome edge - the extremely sharp cutting edge of the scissors blade facilitates gentle cutting of tissue with minimal use of force.

PRÄPARIERSCHEREN, Noir® PRÄPARIERSCHEREN
DISSECTING SCISSORS, Noir® SCISSORS

Die Verbindung der bewährten AESCULAP® Hartmetall Technologie mit der AESCULAP® Noir® Beschichtung führt zu einer extrem hohen Oberflächenhärte. Noir®. Die Präparierscheren mit der hohen Verschleißbeständigkeit im täglichen Klinikeinsatz.

The combination of the renowned AESCULAP® tungsten carbide technology with the AESCULAP® Noir® coating results in an extremely high surface hardness and therefore high wear resistance in daily hospital use.

Die extrem harte (2000HV) und reflexionsarme Noir® Beschichtung unterstützt die Verschleißfestigkeit bei gleichzeitig hoher Korrosionsbeständigkeit.

The extremely hard (2000HV) and low reflection Noir® coating leads to high wear resistance of the instruments and at the same time provides high resistance against corrosion.

AESCULAP®-Nadelhalter sind durch die Struktur der Hartmetall-Maulteile auf das jeweilige, indikationsbezogene Nahtmaterial abgestimmt. Eine glatte Maulfläche sowie 3 verschiedene Haftprofile ermöglichen den „Griff“ der jeweiligen Nadel.

AESCULAP® needle holders have jaws with carbide inserts and according to the use required the resp. structure can be chosen. A smooth jaw surface as well as 3 different serrations enable a „grip“ of the respective needle.

DUROGRIP®

Zum Halten von Gewebe und Membranen. Der Schlitz im Arbeitsende dient der genauen Platzierung der Nadel.

For holding tissue and membranes. The slit in the working tip serves for precise positioning of the needle.

SAUGINSTRUMENTE, SPRITZEN SUCTION INSTRUMENTS, SYRINGES

AESCULAP® Zylinderampullenspritze „Aspira-plus II“ aus rostfreiem Instrumentenstahl (kein Chrom), mit Aspirationsvorrichtung

Nach Einschieben der Ampulle und Aufsetzen der Kanüle ist die Spritze injektionsbereit.

Durch leichtes Rechtsdrehen der Kolbenstange erfasst die Doppelkorkenzieherspitze den Moosgummikolben der Ampulle. Dadurch wird eine zuverlässige Aspiration ermöglicht.

Vorteile:

- Aufbereitung von rost- und säurebeständigem Instrumentenstahl anstelle von verchromten Material
- Umklappbare Hülse für Einführen und Auswerfen der Ampulle

AESCULAP® Cartridge Syringe „Aspira-plus II“ made of stainless instrument-steel (no chrome), with aspiration device

After having inserted the ampulla and the cannula, the syringe is immediately ready for injection.

By a slight twist of the piston rod to the right the double corkscrew tip will grasp the foam rubber of the ampulla.

This enables a controlled aspiration.

Advantages:

- Processing by using corrosion- and acid resistant instrument steel instead of chrome material
- Cartridge insert and ejection by folding back the bush
